## Background

A Notice of Concern (NOC) is a letter that is issued to a manufacturer by UNFPA to remind the manufacturer of its obligation to maintain quality assurance procedures and practices. A NOC may also be issued to procurement agencies and other purchasers to alert them to any potential risks associated with a given product or manufacturer.

A Notice of Suspension (NOS), or Quality Alert, is a letter issued by UNFPA to a manufacturer after serious concerns have arisen about the quality of products or services supplied by that manufacturer.

### 1. Why is an NOC issued?

An NOC is issued both to remind a manufacturer of its obligation to maintain quality assurance procedures and practices, and to inform other procurement agencies of any potential risks associated with a given product or manufacturer.

An NOC is not necessarily cause for public concern. It does not necessarily mean that products or services supplied by the manufacturer are defective or unsatisfactory. If, however, UNFPA does identify a public health risk linked to a given product and manufacturer, it will take appropriate additional steps, including provision of advice to the public. These may include:

- suspension of procurement/distribution of products listed on the UNFPA website for a manufacturer
- issuing an order to temporarily or permanently suspending procurement of products or services from a prequalified manufacturing site.
- temporarily or permanently suspending the prequalified status of a manufacturer.
- recall batches of UNFPA prequalified products that have been procured from a manufacturer or cleared for procurement/distribution by the testing laboratory.
- reject an application for prequalification assessment submitted by the manufacturer.

## 38 **2. When is an NOC issued?**

39

40 A notice of concern (NOC) may be issued to a manufacturer for the following reasons:

- 41 • when product or service quality issues are identified as a result of prequalification testing, pre-  
42 shipment testing, surveillance testing or in-country testing
- 43 • when purchasers or users identify serious deficiencies in product quality or services provided
- 44 • following observations made during an inspection indicating poor compliance with standard  
45 operating procedures or failure to comply with specified quality standards
- 46 • if an inspection report identifies an insufficiently robust response to identified nonconformities
- 47 • where the corrective actions taken or proposed to be taken are considered and unlikely to deal  
48 with the underlying root cause of a critical or major observation; this may include not providing  
49 suitable objective evidence of corrective actions
- 50 • a requested response to the observations noted in an inspection report detailing corrective actions  
51 to be taken or proposed to be taken, has not been received by UNFPA on or before the due date  
52 (i.e. 90 days from the inspection date)
- 53 • if a manufacturer refuses inspection of a manufacturing site.

54 If immediate public health concerns have been identified, or if the inspection observations relate to  
55 misrepresentation of data, falsification or manipulation of data with the intent to deceive, the NOC will be  
56 posted immediately on the UNFPA website (UNFPA has a zero tolerance policy in relation to such  
57 activities since they indicate a serious quality system failure that needs to be urgently addressed by senior  
58 management responsibility).

59

## 60 **3. What does an NOC contain?**

61

62 An NOC states observations made during an inspection that are considered to be:

- 63 • "major" or "minor" non-conformances with UNFPA norms, relevant standards or relevant  
64 standard operating procedures that are of concern in relation to quality management or quality  
65 assurance
- 66 • "major" or "minor" non-compliances with UNFPA norms, relevant standards or relevant standard  
67 operating procedures that were not satisfactorily addressed in the response from the company to  
68 an inspection.

69 For example, deficiencies relating to GMP are as follows:

70 major deficiency — a major nonconformity or observation of a deficiency that has resulted in or that  
71 presents a significant risk of producing a product that is harmful to the user

72 minor deficiency — a non-critical deficiency which either:

- 73 • resulted in production or may result in production of product that does not comply with the  
74 relevant prequalification requirements and/or
- 75 • indicates a major deviation from quality or GMP guidelines
- 76 • and/or indicates a failure to carry out satisfactory procedures for release of batches and/or

- 77
- 78
- 79
- 80
- indicates a failure of the person responsible for quality assurance/quality control to fulfil his/her duties and/or
  - consists of several other deficiencies, none of which in itself is major, but which, combined, may represent a major deficiency and should be explained and reported as such.

81

#### 82 **4. Is there a right of appeal?**

83

84 Yes, an NOC contains the factual information based on product testing and/or observations made during  
85 an inspection. Results from testing will have been shared with the manufacture and observations will have  
86 been discussed during the inspection and listed in the inspection report. Generally, the results or facts that  
87 form the basis of the observation(s) are not in dispute. However, the manufacturer, testing laboratory or  
88 agencies may disagree that a risk exists or with the level of risk identified by UNFPA and that has  
89 resulted in the issuing of the NOC.

90 If the manufacturer disagrees with any aspect of the inspection report and subsequent NOC, it should send  
91 information to UNFPA that gives the basis for its disagreement by email  
92 ([psb.prequalification@unfpa.org](mailto:psb.prequalification@unfpa.org)). The matter will then be investigated and a response provided within 15  
93 working days. Should the site not be satisfied with the response, a one to one discussion, via  
94 teleconference may be arranged.

95

#### 96 **5. How long is an NOC in effect?**

97

98 An NOC will remain on the UNFPA website until UNFPA is satisfied that adequate and appropriate  
99 corrective actions have been implemented effectively by manufacturer.

100

##### 101 **i. When is an NOC lifted?**

102 During the period that an NOC is in place, UNFPA may perform additional and more frequent inspections  
103 if the NOC relates to a manufacturing site that is continuing to supplying prequalified product(s). If the  
104 manufacturing site has been suspended the next inspection will be performed after the manufacturer has  
105 advised that it considers that it has adequately dealt with the observations that led to the issuing of the  
106 NOC. Following such follow-up inspection(s), and if satisfied that sufficient improvements have been  
107 made, UNFPA will lift the NOC and recommend that the site inspected be named/continue to be named in  
108 the relevant dossiers under prequalification or already prequalified. The NOC will be removed from the  
109 UNFPA website and archived, and a notice to this effect posted on this website.

110

##### 111 **ii. Advice to procurement agencies**

112 In all cases where a number of critical and/or a significant number of major observations have been made,  
113 and particularly where an NOC was issued and subsequently lifted, UNFPA reminds the relevant  
114 manufacturer, testing laboratory, or agencies that the improvements made and the level of compliance  
115 with the relevant UNFPA guidelines and/or specifications must be sustained and continue to be improved.  
116 Therefore, in accordance with UNFPA's risk-based approach to planning inspections, the next full

117 inspection — in the case of a manufacturing site testing laboratory — will be performed at an earlier date  
118 than usual, and subsequent inspections performed more frequently until evidence has been provided that  
119 the improvements implemented are permanent.

120 Procurement agencies should monitor their suppliers, including monitoring their compliance with  
121 international standards. UNFPA therefore expects that they will take appropriate action when an NOC is  
122 issued, and after lifting of an NOC apply an enhanced level of due diligence, as part of their supply chain  
123 audit and assurance systems, when dealing with suppliers that have failed to comply adequately with  
124 international standards.

125 Organizations supplying products and/or services from a manufacturer for which an NOC has been lifted  
126 may expect greater scrutiny from their customers, and should plan to support this in the foreseeable  
127 future.

128

## 129 **6. Why is an NOS issued?**

130 An NOS is issued not only to remind the manufacturer concerned of its obligations to procurers and  
131 product users but also to inform procurement agencies of potential risks associated with a product, if these  
132 have been identified. An NOS is also intended to motivate manufacturers to take appropriate corrective  
133 and/or preventive actions in a timely manner, and to address observations and non-compliances. Issuing  
134 an NOS also helps maintain transparency about UNFPA prequalification activities and decisions.

135 An NOS will not disclose commercially-sensitive information.

136 In situations of immediate public health concern an NOS may lead to the:

- 137 • withdrawal of product(s) from the UNFPA List of Prequalified Medicinal Devices and Essential
- 138 Medicines
- 139 • recall of batches of products on the UNFPA List of Prequalified Medicinal Device and Essential
- 140 Medicines that have been supplied by the manufacturer concerned

141

### 142 **i. How long will the suspension remain in force?**

143 An NOS will remain on the UNFPA website until the necessary corrective actions have been  
144 implemented by the manufacturer and approved by UNFPA. An NOS will be removed from the UNFPA  
145 website and archived, and a notice to this effect posted on this website.

146

### 147 **ii. Advice to procurers**

148 Procurement agencies should monitor their suppliers, including monitoring their compliance with  
149 international standards. UNFPA therefore expects that they will take appropriate action when an NOS is  
150 issued, and after lifting of an NOS apply an enhanced level of due diligence, as part of their supply chain  
151 audit and assurance systems, when dealing with suppliers that have failed to comply adequately with  
152 international standards.

153 UNFPA advises agencies supplying products from a manufacturing site for which an NOC has been lifted  
154 that they should reasonably expect an enhanced level of supervision by their customers, and should plan  
155 to support this in the foreseeable future.
